Evidence seal (sha256)	a72a76765f69c4067f1c50ded34d9c7c5c80da1ccc44165f53c9464ac5e641d7

In plain words

This file lists the decisions Azoth took for this system over the period: 5 in total — 1 refused or held before anything reached an AI provider, and 4 let through. Each decision is chained to the previous one by a cryptographic fingerprint, so the integrity verdict above shows whether any entry was changed, added or removed after the fact.

Chain-integrity verdict

INTACT — the sealed decision chain verifies end to end.

Algorithm	sha256(prev_hash || core_canonical)

Refused or held calls

Calls Azoth stopped before they reached a provider, with the rule or reason recorded at the time. Nothing in this list was sent to the AI provider.

#	When (UTC)	Decision	Provider · model	Rule / reason

Obligations — technical evidence coverage

Each row lists an obligation the sealed decisions above are technical evidence for. This is not a determination of compliance.

None in this period.

Disclaimer. Azoth produces technical evidence supporting your obligations. It does not certify, guarantee, or attest compliance, and is not legal advice.

Independent verification

This dossier is verifiable without Azoth. See VERIFY.md for the manifest + chain algorithm and the azoth-verify CLI.

This PDF restates dossier.html from the same sealed evidence. evidence.json is the source of truth; manifest.json covers every file, this one included.
